## Tech Demo: Bondai

Simyon Pinsky  
CEO at Bondai.me

**VOXO**

## Summary

The session focuses on the innovative approach Bondai.me is taking to revolutionise networking at events through the use of voice AI technology. The founder begins by identifying the problem with current networking methods, noting that they are often inefficient and fail to connect people meaningfully. He explains how Bondai.me addresses this issue by using voice AI to engage attendees in conversations before the event, gathering information from LinkedIn profiles and direct conversations to understand their goals and challenges. This AI then matches attendees with the most relevant people based on these conversations, aiming to identify the top 5% of the audience that would be beneficial for each attendee to meet.

Bondai.me's voice AI technology works by calling attendees before an event and conversing with them either via phone or web app. During this conversation, the AI reads the attendee's LinkedIn profile and asks pertinent questions about their objectives for attending the event, the projects they are currently working on, and any challenges they face. This process can take anywhere from three to twenty minutes, depending on how much information the attendee wishes to provide. Following the conversation, attendees receive a link to a web app that presents their potential matches, who are chosen based on both professional and personal interests.

The founder emphasises the versatility of Bondai.me's AI solutions, which extend beyond event networking. One such solution is an AI bot that can be integrated into community platforms like WhatsApp, Slack, and Discord, facilitating relevant connections between members. This bot operates by periodically suggesting connections, which users can choose to pursue or ignore, thereby promoting ongoing networking within these communities. Another solution is a sales agent AI that interacts with potential event attendees before registration, offering them a preview of their likely matches and thereby encouraging ticket sales.

## Tech Demo: Bondai

Wednesday, 12 November 2025

Bondai.me also provides event organisers with valuable insights through a comprehensive dashboard that tracks attendee interactions. This dashboard includes recorded calls, matches, and queries, allowing organisers to understand attendee interests and preferences. The AI records all conversations, enabling organisers to analyse data and identify trends or common interests among attendees. This feature helps organisers tailor event content and engagement strategies to better meet the needs of their audience.

Attendees can update their profiles and refine their preferences through the web app, ensuring their matches remain relevant as their goals evolve. They can also initiate further conversations with the AI to add new information or adjust their preferences. This flexibility allows attendees to continuously optimise their networking experience, making it more effective and personalised.

The founder concludes by discussing the ease of integrating Bondai.me's AI into existing event registration platforms. By using webhooks, Bondai.me can seamlessly blend with platforms like Cvent, allowing attendees to receive AI calls immediately after registration. This integration simplifies the process for attendees and ensures they are promptly matched with relevant connections, enhancing their overall event experience.

# Takeaways

## **Bondai.me revolutionises event networking with voice AI**

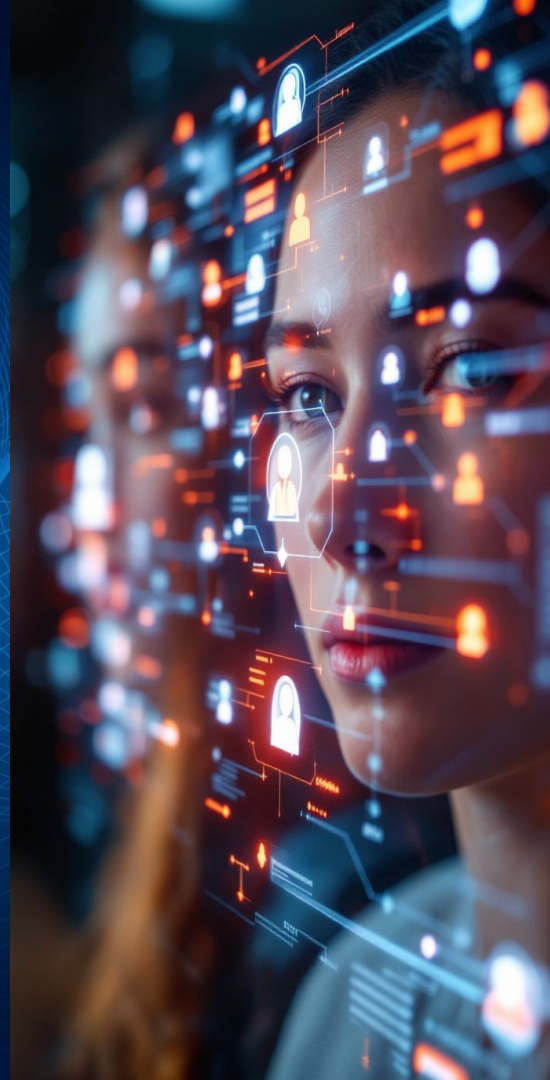

Bondai.me utilises voice AI to engage attendees in conversations before events, gathering information to understand their goals and challenges. This AI then matches attendees with the most relevant people based on these conversations, ensuring meaningful connections and enhancing the networking experience.

## **Versatile AI solutions extend beyond event networking**

Bondai.me's AI technology is not limited to events. It includes bots for community platforms like WhatsApp, Slack, and Discord, facilitating ongoing networking. Additionally, a sales agent AI interacts with potential attendees before registration, offering a preview of likely matches and promoting ticket sales.

## **Event organisers gain valuable insights through comprehensive dashboards**

Bondai.me provides event organisers with detailed dashboards that track attendee interactions. These dashboards include recorded calls, matches, and queries, enabling organisers to tailor event content and engagement strategies based on attendee interests and preferences.
